

InfoBlueprint Online Training Workshops

How to Implement Practical Data Quality Management

9-12 June 2020

Join our virtual workshop as we take you through the route map below.

The route map details the following modules:

- 1. Data Quality Awareness:** What your team must understand about the importance of Data Quality (DQ)
- 2. Data Quality in Context:** The role of Frameworks, DQ dimensions, Data Models and Meta Data in the context of DQ Management
- 3. Assessment:** How to approach conducting a health check on data, how to profile data, and what the profiling statistics tell us
- 4. Requirements:** The requirements of business data producers and consumers, rules to which data must conform and the DQ targets and thresholds
- 5. Measurement:** How to measure the data based on the business requirements
- 6. Correction:** How to 'fix' the incorrect data in terms of missing, incorrect and duplicate data
- 7. Prevention:** How to identify the Root Causes of data defects and stop the issues from re-occurring
- 8. Conclusion:** We put it all together within the context of Data Management
